Aretē

PURSUE EXCELLENCE

Brand Guide

01 / THE PRODUCT

What we're selling

Aretē is a workout tracker for lifting and cardio that turns training into a rank. Log every set and every run in one app, then see where you stand: against your own records, against other lifters and runners, and on a seven-rank ladder earned by showing up.

Who it's for

Anyone who exercises. The core audience is people who strength train and people who do cardio, and the many who do both. It suits a first-year lifter as well as someone chasing a 400 lb deadlift, because scores are measured against lifters of the same bodyweight.

Why it stands out

Most fitness trackers are a logbook for lifting or a GPS app for running. Aretē does both in one place and measures the result, so progress feels like climbing something rather than filling in a spreadsheet.

The hooks

Greek Rank	Seven ranks from Neophyte to Aretē, earned by consistency and training volume. Free for everyone.
Strength Score	Ranks each lift against lifters of the same sex, bodyweight and age, then rolls them into one overall percentile.
Endurance Score	The Strength Score for runners. Ranks your best running times, from 400 m to the marathon, against runners of the same sex and age.
PRs and share cards	Every personal record is caught automatically and becomes a card users post themselves.
AI Coach	Builds a workout or a full multi-week routine in seconds, and reads recent training to say when to push and when to deload.
GPS cardio	Runs, walks and rides tracked on a map, in the same app as the lifting log.

Aretē Premium pricing

The app itself is free to download and use. These prices are for Premium only.

ANNUAL · LEAD WITH THIS

$29.99/yr

One-week free trial, then $2.50 a month. Half the monthly price

MONTHLY

$4.99/mo

Cancel anytime

LIFETIME

$70

One-time. May be retired, so don't feature it

Only the annual plan has the **one-week free trial**. Launching on both iPhone and Android.

02 / THE NAME

Aretē

From the Greek ἀρετή: excellence realized through struggle and pursuit, rather than excellence handed to you. That is the whole positioning. The app does not just log workouts, it measures the pursuit and marks progress toward it.

Spelling

The **ē** is a macron e (U+0113), not a plain "e". Use the macron in all UI copy, marketing copy and prose.

Drop it only where the character set cannot render it, such as file names, bundle identifiers and URLs. Those use the plain form: `aretefitnessapp.com`, `com.aretefitness.app`.

Pronunciation

ar-eh-TAY. Three syllables, stress on the last.

In copy

The brand is **Aretē** on its own, with the macron, in mixed case. "Fitness App" belongs to the domain, not the name.

03 / THE SLOGAN

Pursue Excellence

The name translated into an instruction. It stands on its own without the app beside it and does not go stale as features change.

Setting

Title case, two words, with no trailing period when it stands alone. Uppercase in eyebrows and small labels. Beside the wordmark on dark grounds, it sits below the mark.

Wording

The two words are fixed. It is always "Pursue Excellence", with nothing added and no punctuation of its own. Where it meets another line, it ends in a period and the next line starts fresh.

Supporting lines

Extended	Pursue excellence. Track every rep.
Descriptor	Aretē is a workout tracking app focused on helping you measure and pursue excellence in your training.

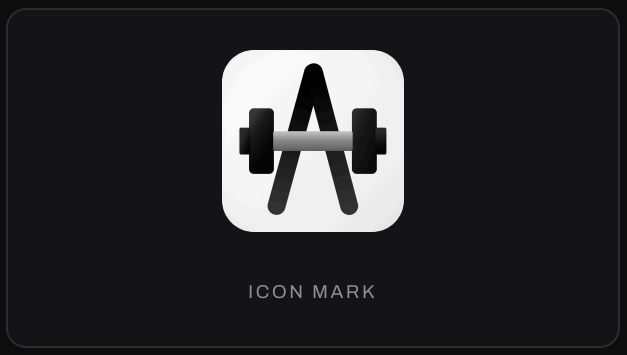

04 / LOGO

The mark

The "A" crossbar is a literal barbell, with weight plates as the crossbar ends. The monogram *is* the equipment, not a barbell icon placed beside a letter. Keep that construction intact if the mark is ever redrawn.

Two variants only

White	On `#0D0D0D`, `#141416`, `#1C1C1E`
Ink	On `#F2F2F7`, `#FFFFFF`, cream

Never place either variant on an accent fill, or on a photo without a dark overlay of at least 60%.

Clear space and minimum size

The unit **x** is the height of the lowercase "e", about 38% of the wordmark's height. Keep at least **1x** clear on every side.

MARK	DIGITAL	PRINT
Wordmark	28 px tall	20 mm wide
Icon	20 px	6 mm

Keeping it intact

Use the supplied files as they are: original proportions, upright, flat white or ink with no effects. Accent colors and PR gold stay out of the mark. The barbell and the "A" are one drawing, and "retē" is artwork with its macron, not live type.

05 / COLOR

Green is the constant

Inside the app, users pick their own accent from eight presets and the whole UI re-themes around it. Anywhere outside the app, where one fixed color is needed, Green is canonical.

Aretē Green

#30D158

Marketing accent on dark. Black text on the fill. Contrast 9.10 on #141416. Never set bright green text on a light background.

Gold is achievement, and only achievement

PR gold
#f9de73

PR gold text
#ad9206

PR gold bg
#FFF3C4

Aretē rank gold
#FFD700

Two distinct golds. PR gold marks a personal record. The brighter rank gold is reserved for the single highest rank, so it reads as rarer.

Neutrals, the default marketing surface

Background
#0D0D0D

Surface
#1C1C1E

Border
#2C2C2E

Text primary
#F2F2F7

Text secondary
#8E8E93

06 / TYPOGRAPHY

One family for marketing

Archivo carries every marketing surface. The product UI uses the operating system font, so the app loads no custom typeface at all.

HEADLINES · ARCHIVO BLACK · SENTENCE CASE

Track every rep

SUBHEADS · ARCHIVO BOLD 700

Measure your excellence

SLOGAN AND LABELS · ARCHIVO SEMIBOLD 600 · 112% WIDTH

PURSUE EXCELLENCE

STAT NUMBERS · ARCHIVO EXTRABOLD 800 · 75% WIDTH

285 lbs

BODY · SYSTEM FONT

Log strength and cardio workouts, track personal records, and monitor progress over time.

Loading

```
fonts.googleapis.com/css2?family=
Archivo+Black&family=Archivo:
wdth,wght@62..125,600..800
```

Fallbacks: `'Archivo Black','Arial Black',sans-serif` for headlines, Archivo then the system stack elsewhere.

Scope

Archivo Black is for headlines only. Paragraphs and buttons use the lighter Archivo weights or the system font. Archivo is the only display face, and when it is unavailable the fallback stack takes over. Round geometric faces such as Poppins or Montserrat clash with its squared shapes.

07 / VOICE

Confident, never hyped

The achievement is the excitement. Aretē states what happened and what it means, and lets the number carry the weight.

Principles

- **Confident, not hype-y.** No exclamation points, nothing "revolutionary"
- **Benefit first.** Say what the user gets before naming the mechanism
- **Plain and short**, except for the app's own vocabulary: Greek Rank, Strength Score. Those are used directly and explained once
- **Second person, active voice**

Rules

- Celebrate with the number, not punctuation. No emoji in UI copy
- **No em dashes in user-facing text.** Use a period, colon or middle dot
- Title Case for buttons and titles. Sentence case, ending in a period, for messages and empty states
- Errors name what failed and what to do next
- Empty states point to the next step
- US spelling

In practice

WHERE	HOW IT READS
Daily reminder	Time to train
Workout summary	Workout complete.
Rank up	You've reached Elite
PR banner	New PR: Max Weight
Error	Couldn't Load Workouts / Check your connection and try again.
Empty state	No templates yet. Save a workout as a template to reuse it.

Preferred words: **workout** (not session), **exercise** (not movement), **PR** (not personal best), **bodyweight** (one word), **225 lbs** (lowercase, with a space).

08 / MARKETING

Free to start, Premium to go further

The free app is a complete tracker, and that is worth saying out loud. Premium is pitched as the coach and the ranking, never as unlocking the basics.

FEATURE	FREE	PREMIUM
Strength, cardio and GPS logging, PRs, Greek Rank, share cards	Included	Included
Workout templates	Up to 7	Unlimited
Routines	Up to 2	Unlimited
Strength Score and Endurance Score	Headline score	Full breakdown
AI Coach workouts, routines and insights	Not included	Included
Weekly muscle volume	Sets per muscle	MEV, MAV, MRV zones

Imagery

At launch, marketing shows the product itself: real app screens with realistic data (a new PR, a Strength Score, a routine), Archivo headlines and the wordmark on a dark background. No stock fitness photography. Gold appears only on PRs and rank ups.

Later photography is shot in-house: real lifters in real gyms, low directional light, black and white by default, candid effort rather than posing.

Share cards

Users share five cards straight from the app: PR, workout, weekly summary, Strength Score and cardio. Each is dark, carries the wordmark and `aretefitnessapp.com`, and leads with one large number. Reposting them is the easiest social proof there is.

Sample copy

WHERE	HOW IT READS
App Store subtitle	Lifting and cardio, ranked
Ad headline	See where your lifts rank.
Instagram caption	Your squat has a percentile. Find out what it is.
Trial offer	Try Premium free for a week with the annual plan.
Free tier	Every workout, every run, every PR. Free.

Any number quoted in public copy must be a real result from the app, never an invented one.

09 / PROGRESSION

Two ladders

The naming rises from mortal to hero to divine, and finally to the abstract virtue itself. Nothing goes above Aretē. Greek vocabulary is for ranks only. Features keep plain names: "Coach", not "Oracle".

Greek Rank · whole account

Neophyte	#888888
Athlete	#4A9EFF
Hero	#4CAF50
Demigod	#FF9800
Olympian	#9C27B0
Titan	#E53935
Aretē	#FFD700

Strength and Endurance Score · percentile

Novice · Beginner · Intermediate · Advanced · Elite · Legend

Both scores share these six tiers. The Strength Score ranks lifts and the Endurance Score ranks running pace. A score of 70 means stronger or faster than 70% of comparable lifters or runners.

The Endurance Score reads running only, at eight distances from 400 m to the marathon. The best result at 5K or longer counts for 70% and the best short distance for 30%.

Neither adds to Greek Rank, but the higher of the two must be strong enough to reach Titan and Aretē.

Naming rules

- Extend an existing ladder rather than inventing a third
- Gold is only ever the top tier
- Color never identifies a tier alone. Pair it with an icon or letter
- Capitalize ranks as proper nouns
